**Network design and
construction are ripe
for innovation**

Render

A high-contrast, black and white photograph of a construction worker. The worker is wearing a dark jacket with reflective silver stripes and is holding a white hard hat. The background shows a dense urban landscape with many buildings under a dark sky. The overall mood is industrial and professional.

Traditional network design and construction methods were not designed to efficiently deliver today's massive networks from scratch.

Despite the large volume of tasks required, traditional approaches rely heavily on manual processes, are disconnected between the office and field, and involve labor-intensive handoffs with little to no automation.

Today's rollouts simply mean big numbers
